Why does the world of Internet need Universal Acceptance?

Internet, as we know it today, has grown at an enormous rate and so has its user base. There are people from all around the world who recurrently rely on internet even for their subtle needs. Although the initial internet service was intended for convenient and quick information sharing across various facilities of the Department of Defense, it soon transformed into a virtual establishment with seamless connectivity and boundless possibilities.

Of course, internet can easily be placed among the list of top best human inventions till date, it still isn't perfect in a way that everybody can use it according to their personal comfort. Internet, for the most part, has been addressed in English, and though it does not create any big stride, the percentage of total English speakers in the world is merely 20-21%. The world today is a communal consensus and that's what internet needs to be.

Universal Acceptance: Need and Desire

The idea is to adopt, employ, advertise and promote Universal Acceptance to help build an internet that feels and works at its endemic best. Universal Acceptance is targeted towards an equal treatment of domain names and internet services. All the storage, validation and working of valid domain names should be accomplished through universal acceptance guidelines to allows users to access internet-based services in their preferred language. Universal Acceptance is the multilingual key to the Internet and its success will surely lead to the widespread convenience and satisfaction

of users at a global scale. Universal acceptance is gradually becoming a prerequisite to help internet users across varied geographies to access internet services in their native language.

Image result for universal acceptance

What leads to the next

Modern concepts like generic top-level domains (gTLD) can considerably promote the desired development in the domain name industry and therefore internet service providers need to be work upon gTLDs and internationalized TLDs to actuate better internet in the upcoming times. With Universal acceptance, a better domain world can be secured with equally benefiting compliance and support for all native languages across the globe.

TP-Link® LAUNCHES Whole Home Mesh Wi-Fi System with a New Appearance.

TP-Link®, a leading global provider of consumer and business networking products, announced the launch of the Whole Home Mesh Wi-Fi System with a new appearance—Deco M4, the newest addition to the brand's lineup of mesh solutions. Unlike the previous disc-shaped products, Deco M4 is an affordable column-shaped product that provides the AC1200 whole home mesh Wi-Fi. Goodbye Wi-Fi Dead Zones

Deco M4 is comprised of a system of 3 units that can be customized to fit Wi-Fi coverage needs up to 4000 square feet, the Deco M4 system can be easily scaled up to accommodate even larger spaces. Deco uses a system of units to achieve seamless whole-home Wi-Fi coverage to eliminate weak signal areas, with an advanced Deco Mesh

Technology, wifi enabled devices automatically switch to the fastest Deco as you move through your home, creating a truly seamless online experience.

Up to 100 Connected Devices

The dual-band AC1200 system is capable of throughput speeds of 300Mbps on the 2.4GHz band and 867Mbps on the 5GHz band—and it supports MU-MIMO data streaming. Deco M4 utilizes Adaptive Path Selection (APS) to ensure the network is always operating at top speeds, quickly identifying and selecting the fastest path for devices to connect to the network. With network speeds three times faster than the previous generation routers, thanks to 802.11ac wireless technology, Deco can handle traffic from even the busiest of networks, providing lag-free connections for up to 100 devices.

Easy-to-Use App

The Deco app walks you through every step with clear directions and simple visuals, making setup fast and easy. It also lets you

completely control and manage your network from the palm of your hand. You can easily limit and monitor internet use and even pause the internet for an individual family member or the entire home.

Robust Parental Controls

Simple, intuitive parental controls allows you to manage and monitor access of network services for children by time allowance, even when you're not home. Monthly usage reports are automatically sent to your phone to keep you apprised of activity on your network.

Key Features:

Maximum Speeds: 300Mbps on 2.4GHz band and 867Mbps on 5GHz band.*

Maximized Range: Seamless coverage up to 4000 square feet* (3 pack)

Seamless Coverage: Wireless

connections and optional Ethernet backhaul work together to link Deco units, providing even faster network speeds and truly seamless coverage.

Expand Coverage: Add more Deco units to expand Wi-Fi coverage to match the size of your home.

Simple Setup and Management: The Deco app (iOS and Android) makes network setup and management a breeze.

More Devices: Supports connection of up to 100 devices.*

Parental Controls: Block inappropriate websites, restrict time spent online, and get monthly reports.

QoS: Prioritizes devices when necessary for the fastest connections. IPv6: Supports the latest Internet Protocol Version 6.

2 Gigabit Ports: Dual Wan/Lan functionality.

Extensive Compatibility: Works with Amazon Alexa and IFTTT and is compatible with all Deco models.

The Deco M4 is available to our customers in 3 pack at Rs.14,999/- and 2 pack at Rs.8999/- at all leading retail outlet and online stores.

DIGISOL Hosts "STEP UP" in Bhubaneswar, a Program to Empower System Integrators

DIGISOL Systems Ltd., a leading provider of the Networking products, recently conducted a training program for System

Integrators-STEP UP in Bhubaneswar. The agenda of this program was to give first-hand knowledge to the System Integrators in the region on the latest products and technology provided by DIGISOL. STEP UP is a DIGISOL property designed to educate System Integrator Engineers in Tier I and Tier II cities about the innovative DIGISOL products available in the market and how these products are designed to meet the current IT Networking Industry demands.

The event held at Hotel Excellency, Bhubaneswar was attended by 65+ System Integrators. Post the training, System Integrator Engineers were awarded with certifications.

Commenting on the occasion, Mr. Mandar Joshi, Vice President

Sales, DIGISOL Systems said, "We are delighted to see an overwhelming response from System Integrators in Bhubaneswar. At Digisol, we believe in growing with our partners, and continue to support them in taking the latest innovation to the customers. We are looking forward to hosting many such training program for our SI partners in various Tier I & Tier II cities."

DIGISOL has been empowering partners and system Integrators by conducting various training program over the years. To keep up the momentum in 2019, the company will continue hosting Step Up program in various Tier I & Tier II cities.

Dr. Ajay Data becomes first Asian to be elected as “Chair of UASG”

We feel extremely proud and humbled on the election of India-based technology leader Mr Ajay Data, Chief Data Xgen, as the Chairman of UASG. He was voted as the winning candidate by a pool of 400 global IT representatives who participated in the voting from over 32 different nationalities and tech backgrounds. Mr Ajay Data took the lead and secured the position over Mr Richard Merdinger, Vice President of Domains for Go Daddy, who was the second contestant in the election of UASG chair.

Universal Acceptance Steering Group(UASG) is a global internet

community initiative tasked to effectively promote the Universal Acceptance of all valid domain names and email addresses. It is financially supported and administrated by ICANN, a not-for-profit public-benefit corporation with participants from all over the world.

Dr Ajay Data, Founder and CEO of Data Xgen Technologies The newly appointed Chairman, Mr Ajay Data who will be the first Indian and Asian to occupy the seat with two years tenure will take charge from Mr Ram Mohan, an Indo-American IT firm representative who was previously the chairperson for the body. Commenting on his election to chair of UASG, the Founder and CEO of Data Xgen Technologies Dr Ajay Data said, “First of all, I extend my sincere gratitude to members who expressed confidence in me for taking forward Universal Acceptance Mission forward. We will work collectively to break all barriers on internet.”

Last year in July, Dr Data was nominated as member of ccNSO of the Council to represent Asia Pacific region.

“Now, I have dual responsibility to address UA readiness issues and provide support. It is surely a mission for us to bring millions of people online. My priority would be people across globe should not face any linguistic barrier or hindrance in writing, sharing and communicating in their own languages on internet,” he added.

The UASG helps organizations ensure their systems are UA-ready and able to accept all domain names and email addresses in any valid script.

New Kaspersky Endpoint Security for Business provides security teams with greater control and automatic anomaly detection

Kaspersky Lab has unveiled the next generation of its endpoint protection with new Kaspersky Endpoint Security for Business. The product features Adaptive Anomaly Control, which intelligently perceives and blocks anomalous applications and user behavior, and offers improved protection from miners and network threats. Kaspersky Endpoint Security for Business now also provides users with a web-based management console, along with features to help automate administrator tasks — all to give IT security teams greater control across all endpoints in their corporate infrastructure.

When a business reaches a certain stature, endpoint protection becomes a challenging task: not only because the number of cyberthreats is constantly growing, but also because the infrastructure itself becomes more difficult to manage and is widening the attack surface. New Kaspersky Endpoint Security for Business is specifically designed to help businesses overcome these challenges.

New capabilities for endpoint hardening and enhanced protection from web-based threats

Kaspersky Endpoint Security for Business improves prevention from emerging threats. New Adaptive Anomaly Control is an intelligent component which analyzes the behavior of users and ‘remembers’ their activity patterns, allowing it to block actions that

are abnormal for a particular user. The whole process is automated, so IT security administrators do not need to configure rules manually. This saves time and reduces the risk of false positives.

Kaspersky Endpoint Security for Business now also provides more capabilities for web-based threat prevention. Encrypted traffic scanning in its Web Threat Protection component enables protection through identifying and blocking threats that attempt to use encrypted channels to penetrate the system undetected. It scans inbound and outbound encrypted HTTPs traffic to intercept potential malicious activity

Flexible manageability with greater control of protection

Kaspersky Lab continues to improve the management capabilities in its flagship endpoint product to give IT security teams the powerful, flexible, and convenient tool they need, to control cybersecurity across all the PCs, servers and mobile devices used by employees.

The SER Group transforms digital information management with future-ready platform Doxis4

The SER Group is an international ECM vendor that is positioned as a “Challenger” in Gartner’s Magic Quadrant for Content Services Platforms 2019. Its recent project with Plasser India is just one example of how the SER Group and its flagship product Doxis4 are helping companies in India to successfully manage the digital transformation. We spoke to Managing Director Morad Rhlid about what the SER Group has to offer the Indian market.

Nisha Harshwal: Morad, the SER Group is already one of the leading enterprise content management (ECM) vendors in the global market. What does your company have to offer the ECM market in India?

Rhliid: First of all, we are excited to help businesses in India bring the digital transformation to their information management! This is what drives us. The SER Group has over 30 years of experience successfully conducting digitalization projects with all kinds and sizes of customers from all industries. Customer satisfaction is extremely important to us. This is reflected in the positive Gartner Peer Reviews, where the SER Group has a top customer rating for the content services platforms market. With over one million users, we are connecting people with information and creating the digital workspace of the future.

Nisha Harshwal: SER’s flagship product is the Doxis4 platform. What makes it stand out from other ECM solutions?

Rhliid: No other software brings together ECM, BPM and collaboration onto one platform like Doxis4 does. It is universal, multilingual and fully scalable to meet growing requirements – no matter which market, industry, company size or volumes of data and documents. Doxis4 utilizes intelligent cognitive services based on a uniform metadata approach. It provides the foundation on which your company can easily build business applications to run artificial intelligence technologies and content analytics solutions. And these are just a few reasons why Doxis4 stands out.

Nisha Harshwal: You mentioned collaboration: It is still a challenge for many companies to create effective collaboration environments, particularly given the increasing complexity of global teams that work across different locations. What do you think is the solution here?

Rhliid: You touch on a big topic right now. In fact, we see collaboration as one of the major trends for information management in 2019. Collaboration solutions must accomplish so much: the integration of external and internal project members, seamless

Managing Director Morad Rhliid about what the SER Group

information access regardless to time and place, providing the same basis of information to everyone, and all while ensuring transparency and security. This is a huge challenge! The answer lies in virtual project and data rooms based on a content services platform – like the Doxis4 iRoom. It addresses all of these enterprise collaboration needs.

Nisha Harshwal: What else do you see as a major trend for information management in 2019?

Rhliid: Content federation offers immense potential. It finds content located across several repositories and provides it to users as if it were from one source. Regardless of where content is created or stored, content federation makes sure that your company’s data and intelligence is kept actionable. As a part of a content services platform, it enables your company to maintain a 360-degree overview of your documents and data, and thereby of your business processes. It makes data discovery and management much easier.

About Morad Rhliid

As a Managing Director of the SER Group, a leading global ECM vendor, Morad Rhliid helps businesses make the jump into the digital future using SER’s content services platform Doxis4 and the integrated collaboration solution Doxis4 iRoom. Rhliid is an ardent believer in the power of ECM and has been successfully convincing IT managers from diverse international markets of this for over 20 years now.

NetRack presented its Air Flow Management Strategies at BICSI Satellite

Seminar -Ahmedabad

NetRack, a leading solution provider for data centers and end-to-end IT server racks, recently participated in BICSI Satellite seminar -Ahmedabad. At the seminar, NetRack expertise team addressed the challenges faced by organizations in implementing effective thermal management for their data centers and server rooms. The team also briefed the visitors on how adoption of Air Flow Management techniques/initiatives maximizes the overall data center efficiency.

BICSI provides a significant platform to learn from the Information & Communications Technology (ICT) community experts, industry leaders and exhibitors. NetRack's Air Flow Management strategies were a great hit at BICSI and was well appreciated by industry leaders.

Speaking on the benefits of Airflow management strategies, Mr Ravi Raj, Brand Head, Director, Sales & Support at NetRack said "Today, we can see annual deployments in data centers and server rooms across various verticals. The servers and equipment used in data center solutions and server rooms generate a lot of heat. With the increased data center setups globally, heat management in data centers and server rooms is on higher priority for organizations. This is driving the demand for high density data center cabinets which offer effective airflow

management and data center management solutions including cooling arrangements, heat dissipation, cable management and also effective power consumption."

Presenter, Mr Krishna Raj, Solution Architect at Netrack also added "Considering the challenges faced by current data center market, NetRack is constantly working on innovative ways to achieve Effective Air Flow Management in the Data-Centers. We offer range of products which provide effective data center solutions which are customizable as per user's requirement. Our air flow management initiatives are a breakthrough in innovation, which improve airflow in data center racks and ensures your mission critical equipment runs cool with more reliability, saving energy costs and capital costs."

NetRack helps to reduce CAPEX and OPEX costs for organizations by manufacturing cost effective and scalable products which are environment friendly. The product range of NetRack is UL certified and follows all the international guidelines for product manufacturing.

Everest Group Names HCL A 'Leader' in Medical Device Engineering

Services Peak Matrix™ Assessment 2019

HCL Technologies (HCL), a leading global technology company has been recognized as a Leader in Everest Group's report, Medical Device

Engineering Services PEAK Matrix™ Assessment 2019: Navigating the Innovation and Compliance Conundrum. The report highlights HCL's ability to deliver end-to-end engagements and while reinforcing HCL's unique partnership approach with customers and its high levels of involvement in product ideation and design.

"New age technologies, especially Digital, Cloud, and IoT are transforming the global medical devices industry. Partnering with these organizations in enabling their transformation by leveraging HCL's expertise in Digital, Cloud, Analytics and IoT is an important aspect of HCL's growth in Medical Devices engineering. Combined with capabilities in AI, AR/VR, our experience in product development and platform engineering, and our deep understanding of the medical devices space, HCL delivers tangible business value to customers. This reflects in our Leader status in Everest Group's Medical Device Engineering Services PEAK Matrix™ Assessment 2019," said GH Rao, President, Engineering and R&D Services, HCL Technologies Ltd.

HCL's product development and platform engineering services enable Medical Device companies to transform their business by driving innovation and product modernization. As a business

partner, HCL helps these companies enjoy quicker time-to-market while creating new revenue streams and meeting regulatory demands. According to Everest Group, HCL provides Medical Device companies a strong combination of technical expertise and deep understanding of the domain. Everest Group recognises HCL's success in expanding the scope of its client partnerships by proactively adopting new age digital technologies such as IoT, AI and AR/VR into its client engagements to improve patient care and reduce the cost of care. The report highlights HCL's focused infrastructure investments in labs and innovation centres, which according to Everest Group makes HCL the "Partner of Choice" for its customers.

"Service providers have a crucial role to play in helping medical device companies navigate through the challenges of complying with evolving regulations, optimizing product development costs, and embracing digital technologies. Enterprises expect them to not only provide the engineering headcounts, but to also offer domain expertise, best practices from other industries, and reusable frameworks/accelerators. A balanced combination of technical capability and domain know-how, proactiveness in showcasing its internally-developed accelerators and PoCs, and willingness to engage via emerging business models have helped HCL Technologies emerge as a Leader in Everest Group's recently concluded PEAK Matrix™ assessment for Medical Device Engineering Services," said Akshat Vaid, Vice President, Everest Group.

RP tech India celebrates its 30th anniversary in ICT industry

RP tech India, Country's only value-added distributor, has reached a milestone this March, celebrating 30 years in the ICT industry. Incepted in 1989 by visionary founders Mr. S.M. Pansari and Mr. K.K. Choudhary, RP tech India has grown consistently and has emerged as the leading distribution powerhouse in the country.

Expressing gratitude to all the stakeholders who contributed in the Company's remarkable growth journey, Mr. K.K. Choudhary, Co-founder and Director said, "On the occasion of 30th anniversary I sincerely thank all the stakeholders who have contributed in our success. We reiterate our commitment to be the most preferred ally of our vendors and channel partners."

Commenced business with a single brand operation and limited coverage, RP tech India has expanded its horizon in multiple verticals and brands. Growing at a consistent 25 per cent CAGR, the Company has emerged as the most admired value-added distributor. As part of its strategic transition, RP tech India is now diversifying in new areas of the business to achieve organic and inorganic growth. Similarly, the Company is strengthening its services arm to expand business in the emerging upcountry markets in order to tap potential consumers and marketplaces.

Talking about the renewed business strategy, Mr. Kapal Pansari, Director said, "We are heading towards the next level of growth and diversifying into the other areas of business. We are rigorously working to develop our expertise in the world of emerging technologies. To enable that we have created a new Enterprise vertical. I am confident that with the most robust distribution ecosystem and comprehensive brand portfolio, we will soon emerge as the leading player in this space.

RP tech India has the most diverse and comprehensive brand portfolio of over 20 international brands. The Company has not only helped these brands to grow in the India market but also provided them end to end ground support to enter into new regions and tap potential channel partners. As a result of this value-added support, these brands have strong and long-lasting ties with the Company.

Highlighting the value addition RP tech India offers to its vendor partners, Mr. Frankie Teh, Director, Sales, ASEAN, Toshiba, said, "Toshiba has been associated with RP tech India for more than 9 years now and is proud to have them as our National Distributor. Our relationship has grown stronger and stronger over the years. RP tech India has always come across to us as a Value Added distributor with its consistent innovative business practices and a mindset to find business opportunity in every situation. Their well-covered footprints in the most remote locations of India with a complete basket of offerings makes them the one stop shop for all IT requirements. We bank on RP tech India for being in sync with our directives and goals."

Commenting on association with RP tech India, Mr. Sumanta Data, Managing Director- India, Indonesia & SWA, Logitech, said, "Our association with RP tech India dates back to the year of our inception, and since then they have been a great support system

towards invaluable logistical efficiencies. Their extensive network has helped us with improved product visibility across India, and their relevant product training has driven in-depth understanding of our product amongst the channels. RP tech India is a valued partner for Logitech, and we wish them immense growth and success in the future."

Talking about the contribution of RP tech India in the growth of ASUS, Mr. Vinay Shetty, Regional Head - ASUS Technology Pvt Ltd - India & South Asia, CPN Business, said, "Asus has been associated with RP tech India for more than 2 decades now and under the partnership, the brand has grown exponentially. RP tech India gives us an edge to voice our challenges and get a prompt response & extended support from the entire leadership team. The access that the Asus team gets for even the smallest operational things to the top leadership is very vital and shows the Company's deep involvement with its brands. This sets the RP tech India apart among its industry peers."

RP tech India is known in the industry as the most channel-friendly distributor. The Company has implemented many path-breaking channel initiatives such as incentive/reward schemes and extensive channel engagement programs. As a result of these

efforts, the Company enjoys descent channel loyalty in the industry.

Talking about his experience of working with RP tech India, Mr. K.L. Lalani, Chairman of Lalani Group, said, "We have been doing business with RP tech India since its inception and we admire the Company for its ethical and channel-friendly business practices. They are very practical in their approach, understand the market sentiments and act accordingly. Secondly, RP tech India is very big on its PR, which has helped them build a strong and positive image in the industry. I think these factors set them apart and make them a leading distributor in India."

Endorsing similar sentiments, Mr. Ramesh Jain, Owner of Supreme Computers, said, "We have been associated with RP tech India for more than 20 years and our experience working with the Company has been excellent. RP tech team is very proactive and understands the nerve of the channel business. There is always a personalized touch to their services, which makes them the most preferred distributor. I congratulate them on their 30th anniversary and wish them best for future endeavour."

RP tech India aspires to offer best in class technology and services to Indian end customers. Talking about the go to market strategy of the Company, Mr. Rajesh Goenka, Director, Sales and Marketing, said, "It is our aspiration to become the one stop shop for all the technology needs of Indian end users. We will continue to focus on developing new channels and marketplaces. At the same time, we are extensively investing in our newly formed Enterprise vertical, which will be the key growth drivers for the Company in the coming years. While we are very bullish growth aspirant, fair and ethical practices are and will remain the core of our business philosophy.

RajMail: An Ambition towards Linguistic Parity

The world around us is constantly expanding, with the total population soaring up to an astounding number of 7.63 billion

people as recent records state. Today, we live in a largely connected world with internet acting as the biggest and most crucial aspect for almost every single routine. While the increasing numbers are quite interesting, one important matter of contention is that not every person accessing the internet speaks English. The internet user base is aggressively increasing and in order to help them make the most of internet services there remains a critical need to develop

a system that will allow every diversified user to access the internet in his/her native language.

Universal Acceptance Steering Group (UASG)

UASG is an earnest alliance of more than 120 global tech leaders like Afilias, Apple, GoDaddy, Google, ICANN, Microsoft, Verisign and XgenPlus, that is working to address UA readiness issues and provide native support across various geographies. The body works to ensure service equity and UA availability for all domain names and email addresses around the world.

A recent study published by the UASG group highlights the tremendous achievement of a native Indian organization XgenPlus, developed by Jaipur based IT firm Data Xgen Technologies, which is working to address UA readiness issues and provide related support across the state of Rajasthan, India.

RajMail

RajMail is a commercially available email solution for the people of Rajasthan, configured and integrated for reliable email communication in their own native language. With this, Rajasthan became the first state to fully adopt and deploy a linguistically fair email service for all its residents.

Developed and powered by XgenPlus, email service 'RajMail' extend its supports and reinforces Rajasthan's e-governance

motive. Through "RajMail" users can easily communicate through improved email language. This particular

Mr. Ram Mohan,
Chair, UASG

has established itself as a transformation. UASG is of the Rajasthan government and their partner XgenPlus for this important initiative in bringing millions of people online."

Future Scope

RajMail is specifically developed to help the citizens of Rajasthan not just to carry improved emailing services in their preferred language but also to ease their communication with the government bodies without facing any technical issues.

Hosted on the Rajasthan State Data Centre and run by the Department of Information Technology and Communications (DoITC), RajMail's functionalities are managed by the state's own IT team, with substantial support from Data Xgen Plus. It will soon actuate 100 % Universal Acceptance (UA) compliance across all the internet-based services.

Words of Appreciation

"With RajMail, Rajasthan residents have been equipped with a powerful tool for engaging with their government, with business, and with society. Initial progress is good, but more remains to be done. Until Universal Acceptance is truly universal, some users with email addresses in non-English scripts (EAI addresses) will be

locked out from online services," the UASG Case Study pointed out.

"The state intends to continue

Dr. Ajay Data,
Founder and CEO,
Data Xgen Technologies

making progress on UA and making sure that all their services can be accessed using an EAI address. The state's IT department and XgenPlus are working together for taking incremental steps while planning its program of work over the next few years, all in service of its vision for a more linguistically diverse Internet," said Dr. Ajay Data, Founder and CEO, Data Xgen Technologies".

Fast. Stable. Everywhere.

ICANN64 Emerging Identifiers Technology

This session was to explore evolving or new technologies that may affect the unique identifier ecosystem that ICANN helps coordinate. The covered topics were DNS over TLS (DoT), DNS over HTTPS (DoH), and Decentralized Identifiers, and offered the opportunity to exchange views and questions with experts working on these technologies.

Anyone who was curious about these topics and wanted to know more were invited to join the session with ICANN's Research team and other invited experts.

The major highlight for the session was "Decentralized Identifiers and Strong Authentication: a brief W3C intro" by Wendy Seltzer. Everything was explained starting from scratch so as to ensure a more clear understanding of the topic. Further, Paul Hoffman discussed DNS over Secure Transports as mentioned earlier which were the main topics of the session. DNS over TLS and DNS over HTTPS.

The session ended with a questionnaire round between the experts and the attendees to clear the doubts raised in between the presentation.

ICANN64 DNSSEC for Everybody: A Beginner's Guide

DNSSEC continues to be deployed around the world at an ever-accelerating pace. From the Root to both Generic Top Level Domains (gTLDs) and Country Code Top Level Domains (ccTLDs), the push is on to deploy DNSSEC to every corner of the internet. Businesses and ISPs are building their deployment plans too and interesting opportunities are opening up for all as the rollout continues. To make sure people know more about DNSSEC this session was organized and presented by Ms Kathy Schmitt.

She explained the below-mentioned topics in her presentation:

Welcome and Introduction of DNSSec

Basic Concepts of DNSSEC

Real World Examples

Summary

To learn more about DNSSEC or to know what Ms Kathy Schmitt explained in her presentation read the article below.

DNS Security Extensions (DNSSEC) are the upgrade for standard DNS protocol which initiates your internet surfing by locating domain names and mapping them to concerned IP addresses.

DNS, at its base level, doesn't deal with web vulnerabilities and therefore incurred several network-based issues with increasing popularity and user base. Subsequently, the need for secure systems cropped up, leading to the development of DNSSEC extensions that could be added to the existing DNS protocols to actuate secure browsing.

DNSSEC is designed by the Internet Engineering Task Force (IETF) as a set of extensions to protect users from cyber threats while navigating the web. DNSSEC adds authentication to the standard DNS system to make it more secure and invulnerable to popular

cyber threats. DNSSEC implementation acts as an added layer of security to the domain name system which is now the universal standard for accessing web addresses across the globe.

Why do we need DNSSEC?

DNSSEC efficiently protects users from landing on deceitful websites or fraudulent addresses which may be targeted to harm users via network-based attacks. Unlike standard DNS, this system protects users from threats like poisoning, phishing, and man-in-the-middle attacks, thereby making the web experience much safer and effective. DNSSEC validates IP address resolution using cryptographic signature. Users never have to worry about the unintended website or pop-ups appearing on their screen while navigating through the web in search of their desired information.

Image result for DNSSEC

How does it help with security?

DNSSEC follows advanced cryptographic signature validation to ensure users only land up on their desired addresses. The system digitally tags/ signs all the data requests which are

directed to DNS servers in order to authenticate requests and resolve the exact address. Security validation in DNSSEC is powered by PKI authentication (public key infrastructure) which uses a couple of cryptographic keys (public and private) on each end. A private key is used to tag the DNS record and this signature is published in a system called Resource Record Digital Signature (RRSIG). This is an advanced level cryptographic technique used to secure modern-day digital protocol to actuate impenetrable security.

ICANN64 Root Server Operations (How it works)

This session from the Root Server System Advisory Committee (RSSAC) was divided into four subsections 1. The overview of DNS 2. A quick explanation of Anycast and how it works 3. Root server System today and its features. 4. RSSAC and some recent RSSAC activities.

Mr Andrew McConachie started with a brief overview of the Domain Name System (DNS), then he talked about IPv4 and IPv6 addresses and its history and what the root zone operators do, which included the Root Zone Administrator and Maintainers. Further, in the session he explained what Anycast allows us to do, we can have multiple instances serve the same data to all sources and

the sources reach different destinations based on intermediate routing policies, and the idea is that the sources can get the data faster through lower latencies and that also the DDoS attack traffic is sent to the closest instance, thereby being distributed so it

shouldn't overwhelm a single server.

Then Mr Andrew McConachie called Mr Carlos Reyes to continue the session and to talk about RSSAC and RSSAC Caucus also its recent activities including current work and recent publications.

He explained what is RSSAC? RSSAC is the Root Server System Advisory Committee as he mentioned, and its mission is to advise the ICANN Board and Community on matters relating to the operation, administration, security, and integrity of the root server system. He continued and explained how RSSAC works and how one can be a part of it, also mentioned that RSSAC Caucus has 106 members currently and at the end, the session was

opened for questions from the attendees.

For any doubts, any RSSAC member or ask-rssac@icann.org were to be contacted.

ICANN64 Session on DNS Fundamentals and DNS Abuse

The DNS Fundamentals session at ICANN64 was hosted under ccNSO division and was scheduled to help all the attendants get a better idea about basic DNS functioning and help them differentiate between internet-based registrant, registrar, and registry. The session also highlighted the applications of DNSSEC and informed the participants about the abuse of DNS and its violations.

The session began with the basic nomenclature and introduction to DNS terminology and its working. DNS is basically a distributed database in which the data is maintained locally but available globally. The session was hosted by session leader Mr. Matt Larson along with staff facilitator Cathy Petersen. The session led the participants into the technical DNS resolution and optimization processes for reduced redundancy and load distribution. Next up, the host explained about the Name

Servers and Zones, Authoritative Server Synchronization, Name server model, SOA and other standard protocols to help the participants get an in-depth idea of the working DNS model.

Technical work examples were also included in the presentation for detailed understanding of the subject.

Later in the day, there was an extended session on "DNS Abuse", led by Mr. John Crain. The session highlighted some common abuse types observed in standard DNS working. The session leaders went on to explain various types of

DNS Misuse, examples of DNS Abuse and the newly evolving DNS threat landscape.

Wipro launches Industrial Internet of Things Centre of Excellence in Kochi

Wipro Limited, a leading global information technology, consulting and business process services company, today announced the launch of its Industrial Internet of Things (IIoT) Centre of Excellence (CoE) in Kochi, India.

The CoE marks Wipro's commitment to developing

innovative IIoT solutions that span across the technology stack for its customers in the industrial manufacturing, automotive, healthcare and pharmaceutical, consumer products and goods, and utilities space. Leveraging artificial intelligence, blockchain and robotics, the lab will develop Proofs of Concept (POCs) and market-ready IIoT solutions in an iterative agile development model.

M. Sivasankar, IT Secretary, Government of Kerala, who inaugurated the centre said, "Congratulations to Wipro on setting up an IIoT lab in Kochi. Kerala has focused on technologies, which are critical to the Industry 4.0 concept and IIoT is an integral part of this proposition. The State has endeavoured to address skill-related issues in emerging technology areas including IIoT by fostering a vibrant hardware-based start-up ecosystem and a skilling framework that connects technical institutions. With the rollout of the Kerala Fibre Optic Network (KFON), the ambitious fibre2home/enterprise/institution network in the next 18 months, local economy stakeholders will increasingly benefit from IIoT deployments. So, Wipro's decision to set up its third global IIoT lab in Kerala is a timely one and I hope it grows into a major development centre in a short period of time."

Separately, Wipro hosted a two-day hackathon on Industrial IIoT from March 12 to March 13 at its Kochi development centre, which saw active participation from leading engineering colleges in Kerala. Wipro will extend pre-placement offers to the winning participants in the final year of their engineering degree course

while those in the penultimate year of their degree program will receive internship opportunities. The new hires will join Wipro's IIoT research and development team in Kochi.

Jayraj Nair, Vice President & Global Head - IIoT, Wipro Limited said, "We are proud to launch our Industrial IIoT Centre of Excellence in Kerala, our third such centre after Mountain View, California and Bangalore. Over the years, Kerala has grown into a technology hub that offers access to a dynamic talent pool with an aptitude for new-age technologies. IIoT presents a huge opportunity for industries in a hyper-connected world and we are confident that our end-to-end services and offerings will help our clients leverage IIoT as part of their digital transformation goals."

By combining its services and offerings across engineering, analytics, consulting and applications with domain expertise in specific industry verticals, Wipro offers comprehensive engineering solutions for IIoT adoption. These range from sensors, connectivity, edge computing, storage, artificial intelligence, machine learning and analytics. Wipro also leverages its partnership ecosystem, which spans across edge, connectivity, application enablement platforms, applications, business solutions, infrastructure, and cloud partners to ensure the best outcome for its clients' IIoT programs.

soundcore Bluetooth Earbuds, priced for Rs. 3499/- and Rs. 4999/-

Soundcore by Anker, a global leader in technology known for its innovation and intelligent solutions launches 'Spirit' and 'Spirit Pro Earbuds' seamlessly comfy, incredibly stylish and capable of delivering excellent sound quality.

Spirit and Spirit Pro are engineered with a premium Li-ion battery and exclusive power management technology. The ultra-efficient combination offers 8 to 10 hours of non-stop music. Spirit's SweatGuard and IPX7 takes waterproof protection and ramps it up to ensure your earphones are protected with hardcore defense against sweat, water, and other liquids and with Spirit Pro's IP68 rated waterproof protection it adds an extra level of hardcore defense. The submarine-inspired structure and impermeable hydro-seal offer complete protection against water and the corrosive power of sweat and other liquids.

Both the Earbuds are built from the high-quality metallic earbud casing and silicone accessories, to the ultra-durable wire, an ideal gym companion.

To guarantee maximum comfort, these earphones come with lightweight and robust build, complemented by ergonomically-designed EarTips. You can choose from multiple sizes to find the perfect fit for your ears.

"We have been working with a mix of VARs, System Integrators, and MSPs, each with their own niche markets."-Mr. Filip Cotfas, Channel Manager, CoSoSys

the most famous ones. Macs are considered low maintenance devices and many organizations are adopting Apple products hoping to easier protect their sensitive data.

Nisha Harshwal:- What are the most significant es with protecting endpoint clients in the enterprise?

Mr. Filip Cotfas:- Data is one of the most important any organizations and security experts have been defend it since digital became crucial to modern ses. Protecting sensitive data on multiple fronts is not is vital for all companies, across all industries across globe. Data Loss Prevention (DLP) has become an nt tool for most organizations and in a poorly ned enterprise infrastructure, controlling data loss extremely challenging. Companies that use a DLP and detect data loss will deliver better business and will gain the clients trust, and will become less e targets.

One of the main challenges is finding the right balance between what should be controlled and what should be allowed, in order to mitigate the disruption in the employee's day to day activities.

Nisha Harshwal:- At times it seems we're fighting a losing battle with endpoint security. What can organizations do in order to stay ahead of the threats?

Mr. Filip Cotfas:- Data Loss Prevention solutions are designed to stop sensitive data leaving the organization's environment. Unfortunately, the number of companies involved in data breaches are continuing to grow, because they don't understand how important it is to protect their sensitive data with solutions like Endpoint Protector.

Endpoint Protector can help enterprises and SMBs set sensitive data policies, scan all data transfers, report and block unauthorized data transfers and get detailed reports and email notifications. With our Data Loss Prevention solution, organizations can get valuable insights about which users are transferring critical data, like PII, Credit Card Numbers, Social Security Numbers and other important information. Protecting individual's private data is

Nisha Harshwal:- What are today's most prominent endpoint security myths? Why do they still persist?

Mr. Filip Cotfas:- The myth of the invulnerable Macs is probably one of

crucial according to the new data protection regulations, such as GDPR, PCI DSS and others, and a DLP product can help shed light on how employees are trying to copy or move sensitive data.

Nisha Harshwal:- What are the essential attributes of a robust endpoint protection solution?

Mr. Filip Cotfas:- Data Loss Prevention is a complex technology and often is seen as the heart of most global data protection regulatory standards. At CoSoSys we have always taken a human-centric approach of Data Loss Prevention. We are continuously improving our products based on real feedback from our Customers and Partners.

A robust DLP solution should have the following strengths: cross-platform DLP solution, easy and fast policies and settings, a modular an intuitive user-friendly interface.

**Mr. Filip Cotfas,
Channel Manager, CoSoSys**

data exposure is risky and expensive, consideration the data protection laws. important to have a data protection strategy and make sure sensitive data is kept inside the company's environment. The role of DLP

solutions has definitely increased in the last years. When people think of threats to endpoints, usually they think about major headlines and oftentimes they suffer more data loss from their own employees than data theft by external attackers.

Nisha Harshwal:- What is your channel road map for India for next 12 months?

Mr. Filip Cotfas:- We have a strong distribution channel in India, through which we help customers locally. India is a very relationship-based country. Therefore, a strong local presence is required in order to build trust and help companies overcome their security challenges. Through our Distributors, we have been working with a mix of VARs, System Integrators, and MSPs, each with their own niche markets. Our channel road map for India is to increase the Channel Network and continue to bring more value to the Partners through our continuous R&D efforts for Endpoint Protector.

Empower and Embrace Women in your life with Stickers on Hike

Hike— the ultimate sticker messaging app, today announced new animated sticker packs to celebrate International Women’s Day.

One day is simply not enough to celebrate Women’s Day. And so, Hike has made it even simpler to celebrate each day of your life by

adding new stickers to its massive pool of women focussed stickers. The new stickers display a wide range of expressions like— popular phrases, slangs, equality, women empowerment, excuses, and much more.

Be a girl boss and flaunt your personality and mood with these cool Hike stickers. Available in-app from March 7th, Hike users can download these from the Google Play and App Store. Women’s Day Stickers

Women Empowerment Stickers

Things Women Say Stickers

Stickers as a means of social expression

Stickers are one of the most loved features of Hike. Hike offers a library of over 20K stickers in 40+ languages and covering multiple genres which highlight the colorful, cultural landscape of India, Bollywood, comedy, festivals, cricket, kabaddi, local catchphrases, emotions, and even excuses. Stickers are expressive and a great way to say what you feel. Hike’s most popular stickers reflect love, laughter, and fun followed by festivals and regional references.

Hikvision Showcases its Latest Technology Innovations at Fire & Security India Expo (FSIE) 2019 in Mumbai

Hikvision, the world’s leading provider of innovative video surveillance products and solutions has participated in the third edition

of the Fire & Security India Expo (FSIE) 2019. FSIE Expo 2019 was held between 28 February – 2 March, 2019 at Hall 4, Bombay Exhibition Centre (BEC), Mumbai as part of the Build Fair Alliance along with ACREX 2019 and ISH 2019.

The event also hosted the FIST Awards ceremony on 28th February. The FIST Awards are annual awards initiated by Fire & Security Association of India (FSAI) and powered by Hikvision. The awards recognized the extraordinary contribution of End-users, Government Organizations, Original Equipment Manufacturers and individuals in the field of security, safety, firefighting and emergency response.

Commenting on the FSIE participation, Ashish P. Dhakan, MD and CEO, Prama Hikvision India Pvt. Ltd., said, “Hikvision had participated in Fire & Security India Expo (FSIE) to present its best-in-class technologies and product innovations for the Indian security market. It is one of the most unique expo platforms as it brings together FSIE, ACREX and ISH. We are happy to showcase the latest products and innovative technologies, including Artificial Intelligence (AI), AI Cloud, Big Data and IoT. We had supported FIST Award to promote the security awareness and spirit of excellence among the security professionals and end-users community.”

He further added, “We are confident that all the latest products and

cutting-edge AI technology applications will enhance the end-users’ engagement with latest technologies. We will showcase DarkFighterX and HDTVi 5.0 Product Series along with latest offerings in Access Control, Video Door Phone, Intrusion Alarm, Perimeter Security, Smart Home (EZVIZ) and Storage categories.”

At the event, Hikvision showcased a series of latest and most advanced technological innovations with AI Technologies, the signature DeepinView Series IP Cameras and DeepinMind Series NVRs. It will feature live demos of AI based applications for Face Recognition, People Tracking and Perimeter Protection. Safe City System structure with AI Cloud architecture was displayed.

Hikvision had showcase a whole new range of vertical specific solutions, including Specialized Applications, Intelligent Traffic Management Solution (ITMS) and Mobile Enforcement Devices (Body Worn Cameras). Hikvision also displayed the latest range of professional IP Cameras, Intrusion Alarm System, Pyronix Cloud and Home control Applications,

Video Intercom System, EZVIZ Smart Home Cameras, Under Vehicle Surveillance system (UVSS) and Face Recognition Turnstile were on display. The wide range of Hikvision products got good response from the system integrators and end-user community.

Zebtronics launches a car charger 'ZEB-CC242A2', launches revolutionary compact earphones dubbed 'Zeb-Peace' with voice assistance and flagship chassis dubbed Zeus

Posted by Nisha on March 25, 2019

Zebtronics launches a car charger 'ZEB-CC242A2', launches revolutionary compact earphones dubbed 'Zeb-Peace' with voice assistance and flagship chassis dubbed Zeus

Zebtronics launches a car charger 'ZEB-CC242A2'

Zebtronics, India's leading supplier of IT peripherals, sound systems, mobile/ lifestyle accessories, and surveillance products adds a new car charger 'ZEB-CC242A2' to its extensive range of mobile accessories.

If you've always been driven, spending most of your commute time on mobile has become a necessity whether it's for entertainment or

attending to work calls and schedules after work to have a better head start to next day. With the exceeding internet usage, it's more than a must to have your car equipped with a car charger.

ZEB-CC242A2 is a simple on design car charger that comes with an overall matte finish give it rather a premium look and feel. It has dual USB ports with a total of 2.4A output for effortless

charging.

Commenting on the launch of the product, Mr. Pradeep Doshi, Director - Zebtronics India says "We've been very particular in terms of upgrading our product line whether it's our speakers range or something as small as a car charger, since we believe in staying ahead with technology."

The product is available in all leading retail stores across India Zebtronics launches revolutionary compact earphones dubbed 'Zeb-Peace' with voice assistance

Enjoy the hands free experience with true wireless earphone 'Zeb-Peace'

Music makes even the most monotonous workout productive with good beats to get through arduous hours of training. Get instant motivation while you listen to podcasts or play your music numbers back to back without the hindrance of wired tangle mess. Our Zeb-peace is going to help you ease down with its true wireless technology geared to have your peace in place.

Zebtronics India Pvt. Ltd, India's leading brand of IT peripherals, sound system, mobile/lifestyle accessories and surveillance products has launched a revolutionary true wireless earphone

experience with 'Zeb-Peace'.

Zeb-peace is a true wireless experience meaning it operates like a stand alone wireless headset with no wires involved. It looks premium with a sporty design and an overall glossy finish. The earphones are designed like the crescent which are splash proof and absolutely lightweight at 4 grams each.

Snug fit

The earpods are designed with precision for a secure, comfortable and snug fit. So while you're lifting weights, running a mile or just taking a walk the earpods will not fall off. They're designed precisely so that you can focus on what's more important to you.

Pairing/ call function

The pairing with this headset is real quick, it can be paired individually as headset or together to work like a stereo earphone. Once paired you can take calls with a touch and enjoy the clarity that the microphone offers.

Voice assistance

Ask more questions and get instant replies with voice assistance support for Android and iOS devices. Find out which route to take or find the weather conditions in a jiffy with a double press assistant shortcut on this earpod.

Rechargeable battery case

Don't fret over the battery life because this model comes with a portable charging case when charged can offer additional battery life of about 6 hours. You can put the earpods back into their spot and have it charging on the go. The battery case is extremely light and can easily fit into a pocket.

Speaking on the newest launch, Mr. Pradeep Doshi, Director - Zebtronics says, "Everyone is joining the wireless revolution but with our Zeb-peace we're taking it up a notch with voice assistance for Android and iOS devices."

"Remain entertained with our true wireless earphone that will offer you peace of mind minus the wired tangles"

The wireless earphone comes in black color and is available with leading retail stores across India.

Zebronics launches its flagship chassis dubbed Zeus from its gamer's dream range

Tempered glass, RGB fan, extra space and a lot more for gamers with the Zeus

Zebronics has introduced its premium range dubbed as Gamer's dream which covers an extensive range of chassis, keyboards, headphones out of this range comes Zeus, a flagship chassis which is nothing short of a stunner.

Tempered glass on sides and front

Sliding side panels

RGB LED strips

Large 200mm front RGB fans

Upto 175mm CPU cooler and 390mm GPU

Dual USB 3.0

Can support upto 5 fans with fan controller

1mm thickness/9.5kg weight

Gamers dream range is a premium gaming range that has products like chassis, keyboard, headphones, mouse and power supply exclusively.

Tempered glass sliding doors on the side, magnetic dust filter on the top with RGB strips that and a cooling that will truly have

your attention, Zeus is all that and much more.

Apart from looking premium this mid tower chassis has a tempered glass on both sides and on front. There are sliding type side panels which makes it an effortless ordeal. Zeus is rigged with LED's like for instance it has side RGB LED strips to give it an exceptional feel with features like upto 175mm CPU cooler and 390mm GPU.

Zeus has side RGB LED strips. It comes with 5 fans with two 200mm fans on the front and dual 120mm fans on the top and one 120mm fan in the rear with ring LEDs.

The fan controller which is on the front panel has modes which can change from low, medium to high. The tempered glass along with all its features radiates premium looks wise and its overall weight 9.5 Kg.

Commenting on its newest addition to its gaming category, Mr. Pradeep Doshi, Director - Zebronics, says, "The gaming community is always on the lookout when it comes to buying premium gaming products the war is always between functionality, style and the price factor that describes them best. We feel that our Gamer's dream range offers the best take for instance our Zeus, it's well built and has enough cooling solutions and storage space that helps gamers dream even bigger"

The product is already available in leading retail stores across India

SUSE Completes Move to Independence, Reaffirms Commitment to Customers, Partners and Open Source Communities as Industry's Largest Independent Open Source Company

SUSE® today announced the completion of the company's acquisition from Micro Focus by growth investor EQT and its status as a standalone business. With its ongoing momentum, portfolio expansion and successful execution in the marketplace, SUSE is now even better positioned to focus on the needs of customers and partners as a leading provider of enterprise-grade, open source software-defined infrastructure and application delivery solutions that enable customer workloads anywhere – on premise, hybrid and multi-cloud – with exceptional service, value and flexibility.

The newly independent SUSE has expanded its executive team, adding new leadership roles and experience to foster its continued momentum into this next stage of corporate development. Enrica Angelone has been named to the new post of chief financial officer, and Sander Huyts is SUSE's new chief operations officer. Thomas Di Giacomo, formerly chief technology officer for SUSE, is now president of Engineering, Product and Innovation. All three report to SUSE CEO Nils Brauckmann.

"Current IT trends make it clear that open source has become more important in the enterprise than ever before," Brauckmann said. "We believe that makes our status as a truly independent open source company more important than ever. Our genuinely open, open source solutions, flexible business practices, lack of

enforced vendor lock-in and exceptional service are more critical to customer and partner organizations, and our independence coincides with our single-minded focus on delivering what is best for them. Our ability to consistently meet these market demands creates a cycle of success, momentum and growth that allows SUSE to continue to deliver the innovation customers need to achieve their digital transformation goals and realize the hybrid and multi-cloud workload management they require to power their own continuous innovation, competitiveness and growth." SUSE's transition is timely as containers are enabling new levels of agility and the need for digital transformation built on open source software-defined infrastructure and application delivery technologies is growing. SUSE's heritage in open source software, strong brand and array of innovative solutions, including container management, ideally position it to capitalize on this market dynamic, creating tremendous value for customers and partners. EQT's backing and SUSE's independent status will enable the company's continued expansion as advanced innovation drives growth in SUSE's core business as well as in emerging technologies, both organically and through add-on acquisitions.

For more information visit our website:

Toreto[®]
TECHNOLOGY DELIVERED SIMPLY

Toreto Launches 'TODS' – Touch Sensitive Bluetooth Earbuds

Toreto, a leading name in the innovative and portable digital product market, has launched TODS – wireless earbuds. These earbuds allow you to get your daily dose of music while jogging, cooking or driving. Bluetooth enabled TODS get connected easily with any phone without the hassle of wires. These earbuds are sweat proof and enable you to enjoy non-stop music for a longer duration.

Toreto's TODS wireless earbuds help create an unforgettable musical experience, they are designed to fit perfectly into the ear and deliver crystal clear high definition sound. With large battery backup, one can enjoy 4 hours of non-stop music. Available in striking black colour TODS promise to jazz up the style quotient. The box that comes along with the TODS have an inbuilt magnetic charger which eliminates the need to carry a separate charging cable.

Toreto TODS Features:

Smart pairing

TODS come with True Wireless Connection (TWS) that allows the connection of the earbuds wirelessly through Bluetooth.

Comfortable fit

TODS are extremely comfortable and can be worn all-day long without hurting the ears. The buds are available in three different sizes

Magnetic charging case

The attractive case of TODS comes with an inbuilt magnetic

charger. Once the earbuds are back in the case they automatically

start charging.

Easy to control

Extremely easy to operate; TODS are manufactured to recognize 'touch'. By just touching the earbuds you can easily control the music. They also come with an inbuilt mic which allows the management of calls too. Double tap on the earbuds to take or reject calls, to repeat the song, press the left earbud for a little longer and press the right earbud for a little while, if you want to change the song. Double long press of the left earbud takes you back to the previous song.

Fast charging

Enjoy 4 hours of non-stop music in one go with just two hours of charge you can. The earphones can be completely charged three times with the charging case, which means complete 9 hours of musical fun. It also has a standby time of 80 hours.

Vodafone Idea deploys latest technologies to enhance network experience for customers in Mumbai Metro

Vodafone Idea Ltd., the largest mobile operator in India, is on a major network modernization exercise in Mumbai metro. The

operator is deploying new technologies such as Massive MIMO, Small Cells, TDD sites to enhance coverage and network capacity in the metro city.

Addressing the digital connectivity needs of its millions of customers in Mumbai, Vodafone Idea has deployed more than 5,000 Massive MIMO, small cells and TDD sites across several regions such as Church gate, Prabhadevi, Pali hill, Lokhandwala, Versova, Andheri, Jogeshwari, Bandra and Dadar. The operator has also installed over 1900 dedicated indoor coverage solutions for high rises and commercial places. The momentum of deploying latest technologies to enhance network capacity and coverage for richer customer experience will continue over the next few months.

Earlier speaking about this mammoth network integration and consolidation project, Mr. Vishant Vora, Chief Technology Officer, Vodafone Idea Ltd. said, "With meticulous pre-merger planning and rigorous post-merger execution, we have ensured that our customers remain confidently connected and enjoy uninterrupted services even as we integrate and optimize our network in a phased manner across circles. We have partnered the best of global vendors and equipment suppliers to bring the best network experience for

our customers."

As part of the network consolidation exercise – the largest such integration in the world – Vodafone Idea has also done 4G spectrum refarming in Mumbai. This has resulted in upto 2X* faster speed for 4G customers in the metro. Speaking on the occasion, Sunil Tolani, Business Head – Vodafone Idea Ltd. said "I am happy to announce that 'Mumbai just got 2X faster' which means that our customers will now experience 2X download speeds on the 4G network. We will be utilizing multiple media like OOH, radio and digital to reach out to our audience and hope they will enjoy the benefits of our focused network initiatives in Mumbai".

The 150th Massive MIMO site was installed in Andheri and inaugurated by Sunil Tolani, Business Head – Vodafone Idea Ltd.

Massive MIMO is a 5G technology wherein instead of single antenna, an array of antennas are used to increase the capacity and speed manifold. MIMO sites not only give higher speed but multiple antennas spread in angular shapes cover wider range than conventional antennas. These are used in areas of high footfall and traffic. Small Cells are electronics used in congested lanes where normal sites are not possible.

Team "SouL" from Mumbai emerge victorious at OPPO PUBG MOBILE India Series 2019

OPPO, a leading global smartphone brand, dedicated to providing products infused with art and innovative technologies in partnership with Tencent Games and PUBG Corp announced the winners of "OPPO PUBG MOBILE India Series 2019" today. The Grand Finals of the OPPO x PUBG MOBILE India Series 2019 took place yesterday, the 10th of March 2019. It took place in Hyderabad with the support of the Telangana Government garnered an extraordinary response from PUBG MOBILE enthusiasts, as players and audience were treated to an eSports spectacle like no other. While team "SouL" emerged victorious, the tournament was hard-fought and closely contested with some edge-of-the-seat action on offer.

In one of the most engaging preliminary rounds of any eSports event, OPPO PUBG MOBILE India Series 2019, sponsored by OPPO witnessed over 400,000 games played across in-game qualifiers and 3 online rounds with over 575,000 registrations from across the country. What followed, was a thrilling Grand Finale with the top 20 squads battling it out in the greatest eSports experience the country has seen till date. With the support of the Govt. of Telangana, the event took place at the GMC Balayogi Indoor Stadium, Hyderabad. The open-for-all event put gaming aficionados, professional and amateur gamers under one roof united by their common love for PUBG MOBILE.

Following the India Series, Aneesh Aravind, General Manager,

Tencent Games India said – "Our congratulations to team XX for winning the OPPO PUBG MOBILE India Series 2019 with a mix of intelligent squad play, clever zone movement and ability to pick up a high number of kills. With India Series 2019, we delivered a world class tournament partnering with Indian esports companies, which we are sure, will cultivate the industry with many more to come. The India Series garnered 35 million views on YouTube, Facebook and Sony Liv at a peak concurrent of 260,000, establishing itself into prime-time entertainment category. Also, we extend our heartfelt thanks to OPPO, our title sponsor for taking the initiative to grow esports in India"

Commenting on the occasion, Will Yang, CMO OPPO South Asia, said, "Heartfelt congratulations to team XX for putting up a great show and winning the OPPO PUBG Mobile India Series 2019. Just how our hero products portray sheer brilliance and groundbreaking technology, the winners have depicted consistent dedication and powerful strategy in this championship to achieve success. We are extremely delighted that our partnership with Tencent Games has helped us reach out to a larger set of consumers and helped in popularizing the game for masses."

Portronics
Innovative. Digital. Portable.

Portronics Launches "Mport 4C1" a 4-in-1 Multimedia HUB

Portronics, a leading provider of innovative and portable gadgets has launched "Mport 4C1", a 4-in-1 Type-C to Type C/USB/HDMI/VGA connector. With this launch, Portronics has added another jewel to its existing series of USB hub.

Portronics Mport 4C1 is a smart & sleek, portable plug n play device that can solve all your woes. It is your perfect on-the-go companion which helps you to connect up to 4 different smart devices of different connector types to the Type C port of your laptop.

Connect 4 Devices:

Connects simultaneously, upto 4 different gadgets to your Type C Laptop using 4 ports – a USB 3.0 at a super speed of 5GBPS, a Type C, an HDMI at 4K/60FPS and a VGA 1080P Ultra HD. Ultra Fast Charging with Power

Mport 4C1 is a USB 3.0 Type C Multimedia Adapter, not only performs Power Delivery but also facilitates Data transfer. This enables MacBook recharging at a full-speed while remaining connected to other devices simultaneously.

peped Data Transfer:

Mport 4C1 – guarantees a fast and stable Data transfer. The transfer speed of Type C is 5Gbps, which is 10 times faster as

compared to USB 2.0 which is around 480mbps. For example, a single HD movie of around 1GB size only needs about a few seconds to be transferred through on Mport 4C1.

Safe Operation:

With built-in protection from over-voltage and over-current, Mport 4C1 is designed to keep all your digital devices safe.

Versatile:

This 4-in-1 connector is a plug n play accessory; does not require any installation of any drivers.

Compatibility:

Mport 4C1 is a plug n play device that can easily fit into all type of laptops with Type C ports irrespective whether the operating system is Windows, MacOS or Android.

Physical Attributes:

Inspired from Apple's minimalist design philosophy, Mport 4C1 flaunts of sleek looks, an aluminum-alloy finish and a compact design.

Port Details:

- USB A 3.0/2.0 ports x 1
- USB 3 TYPE C x 1
- HDMI 4K/60FPS x 1
- VGA 1080P Ultra HD x 1

Optiva Secures Multi-year Support Agreement with Afghan Wireless Communication Company

Optiva, an innovative software provider of mission-critical, cloud-native, monetization solutions to leading communication service providers (CSPs) globally, has secured a significant upgrade and multi-year support agreement with Afghan Wireless Communication Company (AWCC) for its Optiva Charging Engine, Voucher Management and Policy Control solutions.

“Over our more than 10-year partnership, Optiva has earned our trust to deploy and support mission-critical, real-time converged charging and policy control solutions for us,” said Managing Director and Board Member of AWCC Amin Ramin. “Working closely with Optiva team, this upgrade will enable us to increase monetization, offer new value to our customers and prepare us for migration to a public cloud environment with unmatched scalability.”

AWCC needed a portfolio offering with a robust roadmap that would position and ready them for a future public cloud solution. Their upgrade provides a roadmap to the public cloud and equips AWCC with the functional capabilities to tap into the growth potential of Afghanistan. The upgrade will also help AWCC advance its growth strategy and gain capabilities for targeting new customer segments.

Also, the upgrade will allow them to eventually run their BSS

stack, including real-time charging, through remote operations and management. This will improve AWCC’s resiliency and operational challenges compared to running the stack via the traditional, on-premise deployment models.

“Optiva’s remote delivery expertise enabled us to accomplish our goals despite the extreme and challenging conditions in Afghanistan. As they maintain our BSS platform and continue to support our business operations, these capabilities will afford us ongoing access to feature-rich and advanced solutions,” said Ramin.

A leading telecom operator, AWCC serves more than five million customers. They provide innovative services, including as LTE, and are now in the planning stages for providing 5G services to subscribers.

“AWCC will continue to set milestones of innovation in telecom, and Optiva will remain a ready partner to help them succeed in challenging conditions and a competitive, rapidly-changing market,” said Danielle Royston, CEO of Optiva. “The upgrade allows us to help AWCC further achieve their strategic business goals and position them for even greater success in the future with the transition to the public cloud. Our role as their partner is to maximize the value they receive today while preparing them for transformation tomorrow.”

Detel products are now available on Flipkart

Detel, widely-known for its economical product range, including feature phones, accessories, and televisions has partnered with Flipkart, an e-commerce marketplace company. With the vision of connecting 40 crore Indians, the complete range of Detel products are now available on Flipkart.

In India, mobile penetration has reached the next level, where it has moved beyond the urban cities to reach the tier-2, tier-3 cities and other rural parts of the

country as well. With this partnership, Detel will continue to build a strong portfolio in the feature phone and TV category, providing customers with a vast selection, unmatched value and fast & reliable, doorstep delivery.

Commenting on the development, Mr. Yogesh Bhatia, MD, Detel says, “Our endeavor is to expand the horizons of smart technology by providing an affordable and uncompromised user experience for our end consumers. With our partnership with Flipkart, we aim to provide customers with easy access to Detel Products across India” “With this tie-up, we aim to reach to the audience in tier 1 and 3 cities” he further added.

What is RSSAC Caucus

Caucus is essentially a group of volunteers with field knowledge and expertise in Root server system and internet

system experts. The body is formed to address the RSSAC issues using technical expertise and efficient frameworks for getting the required work done on a global scale.

Apart from technical updates on current RSSAC and Caucus work model, the session also helped members get a better understanding of the proposed Governance Model for the DNS Root Server System by RSSAC. The session hosts clearly defined the eleven principles for the operation and evolution of the DNS Root Server System and also described an initial governance model for the root server system and its operators.

domain. The members are predominantly appointed by RSSAC board members and mainly consist of over 100 DNS and root server

DNSSEC for Everybody

DNSSEC continues to be deployed around the world at an ever-accelerating pace. From the Root to both Generic Top Level Domains (gTLDs) and Country Code Top Level Domains

(ccTLDs), the push is on to deploy DNSSEC to every corner of the internet. Businesses and ISPs are building their deployment plans too and interesting opportunities are opening up for all as the rollout continues. To make sure people know more about DNSSEC this session was organized and presented by Ms Kathy Schintt. She explained the below-mentioned topics in her presentation:

- Welcome and Introduction of DNSSEC

- Basic Concepts of DNSSEC
- Real World Examples
- Summary

To learn more about DNSSEC or to know what Ms Kathy Schintt explained in her presentation read the article below.

DNS Security Extensions (DNSSEC) are the upgrade for standard DNS protocol which initiates your internet surfing by locating domain names and mapping them to concerned IP addresses. DNS, at its base level, doesn't deal with web vulnerabilities and therefore incurred several network-based issues with increasing popularity and user base. Subsequently, the need for secure systems cropped up, leading to the development of DNSSEC extensions that could be added to the existing DNS protocols to actuate secure browsing.

Mobile World Congress 2019: The Starlets of the season

The biggest and most exciting event in the mobile industry, Mobile World Congress 2019, kick started on 25th this month and will officially last till 28th. It is currently proceeding in Barcelona, Spain, at two of its best venues – Fira Gran Via and Fira Montjuïc. Few of the biggest tech giants took to the stage and showcased their latest products like phones, tablets, smartwatches, along with other tech.

Here are the best picks from #MWC2019.

The Foldables

Huawei Mate X

Probably the torch bearer of the majestic 'foldable' line of smart phones at MWC 2019, The Huawei Mate X is a next-gen foldable phone geared with 5G-ready out of the box. The \$2,600 tech beast sports an 8-inch screen, three cameras, the new Kirin 980 chipset,

and a huge 4,500 mAh battery, making it one of our favorites at this years MWC show.

Samsung Galaxy Fold

25-28 February 2019

Next up in the list is the much-awaited Samsung Galaxy Fold with a unique two screen and 6 camera line up. Galaxy Fold sports each of a 4.6-inch screen, one on the outside when closed like a book, and a 7.3-inch inside display. Cameras are everywhere with three on the back, two inside and one in the cover. Powered by Qualcomm's latest Snapdragon 855

processor and a whopping 12GB of RAM, Galaxy Fold brings 512GB of storage on board for all the high-end fanatics out there.
